                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    엄
                                                                                                                                                                                                   US-08-381-097A-3

Sequence 3. Application US/08381097A

Patent No. 5643890

Patent No. 5643890

APPLICANT: Iverson, Patrick L.

APPLICANT: Mata, John E.

TITLE OF INVENTION: Synthesic Oligodeoxyribonucleotides

TITLE OF INVENTION: Which Mimic Telomeric Sequences for Use in the Treatment

TITLE OF INVENTION: of Cancer and Other Diseases

NUMBER OF SEQUENCES: 21

CORRESPONDENCE ADDRESS:

ADDRESSEE: Zarely, McKee, Thomte, Voorhees, & Sease

STREET: B01 Grand Suite 3200

CITY: Des Moines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 5, Application US/08381097A

Sequence 5, Application US/08381097A

Batent No. 5643890

Patent No. 5686306

GENERAL INFORMATION

APPLICANT: West, Michael David

APPLICANT: West, Michael David

APPLICANT: Wright, Woodring E.

ITILE OF INVENTION: METHODS AND REAGENTS FOR

ITILE OF INVENTION: MEASURING TELOMERES

NUMBER OF SEQUENCES: 8

CORRESPONDENCE ADDRESS:

ADDRESSEE: 1933 West Fifth Street

STREET: Suite 4700
                  PROBLICATION NUMBER: US/08/153,051B
FILING DATE: No. 5645986ember 12, 1993
PRIOR APPLICATION NUMBER: US/08/166
FILING DATE: March 24, 1993
APPLICATION NUMBER: 08/038,766
FILING DATE: March 24, 1993
ATTORNEY/AGENT INFORMATION:
NAME: Warburg, Richard

Sequence 49, Application US/09735363A

Patent No. US201004168A1

GENERAL INFORMATION:

APPLICANT: Fillon, Mario

APPLICANT: Fillon, Mario

TILE OF INVENTION: Therapeutically Useful Synthetic Oligonucleotides

FILE REPERENCE: 02811-0181

CURRENT APPLICATION NUMBER: US/09/735,363A

CURRENT APPLICATION NUMBER: 60/170,325

PRIOR PILING DATE: 1999-12-13

PRIOR PLILING DATE: 1999-12-13

PRIOR FILING DATE: 2000-08-29

NUMBER OF SEQ ID NOS: 87

SEQ ID NOS: 87

SEQ ID NO 49

LENGTH: 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 29, Application US/09817387

Fatent No. US2010039263A1

GRNERAL INFORMATION:

APPLICANT: Max-Delbruck-Centrum fur Molekulare Medizin

TITLE OF INVENTION: Chimeric Oligonucleotides and the Use Thereof

FILE REFERENCE: 101195-24

CURRENT APPLICATION UNMBER: US/09/817,387

CURRENT FILING DATE: 2001-03-26

FRIOR PPLICATION NUMBER: DE 197 20 151.2

PRIOR FILING DATE: 1997-05-02

NUMBER OF SEQ ID NOS: 29

SOFTWARE: Patentin Ver. 2.1
